

"The paper work and background research are sometimes staggering. You never appreciate them until a full flight test is running."

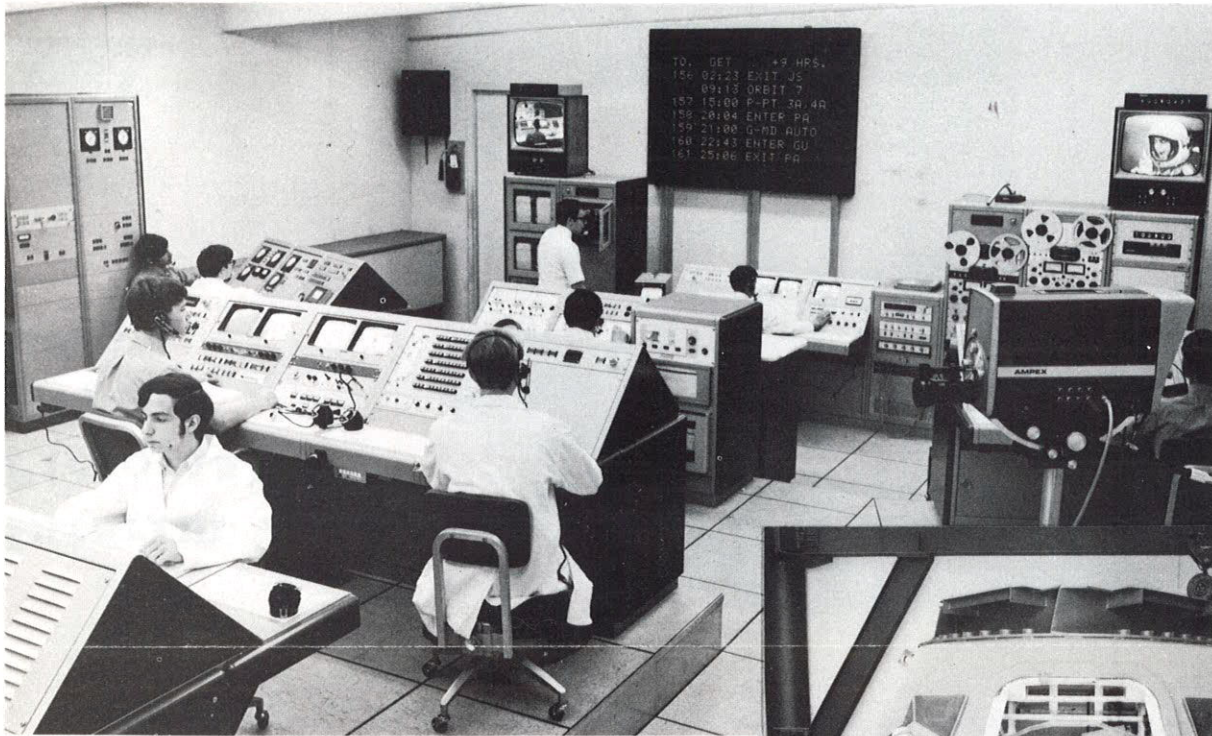

Flammability tests under varying altitude environments qualify materials. A seemingly endless number of checking procedures are part of the quality control system.

PROJECT SPARC, Northeast High School, Cottman and Algon Avenues, Philadelphia, Pa. 19111

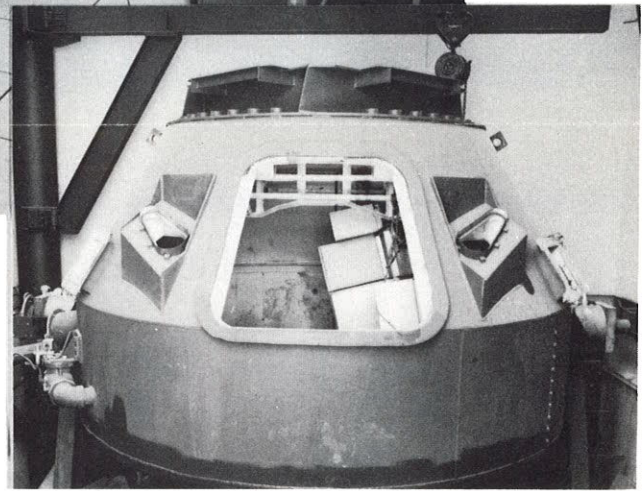

# Interim Pictorial Report 1970

Those who are familiar with the original Systems Evaluation Facility will be amazed at this growth. "High school was never like this."

Control room facilities are undergoing operational checkout while the Apollo (Command Module) altitude chamber is under construction. The Apollo simulator will also provide three axis motion. Control stations include: Master Control, Observation Board, Environmental Control, Medical Monitor, Flight Simulation and Data Acquisition.

Spin table tests on the Student Astronauts provide valuable medical detail for the continuing studies with Jeanes Hospital. Careful design and planning are paramount to any research activity.
